.about

My name is Antonios Manaras, I come from Greece and currently living in Geneva, Switzerland. I work as a Web Developer Intern at CERN and my primary technical interest is IT Security. I like to research for new techniques and issues on the wider field of InfoSec, such as Web Application Security, Cryptography, Penetration Testing and Digital Forensics and take part in CTFs.
I am actively involved and member of ***OWASP***, Open Web Application Security Project and since 2011 I am the leader of ***OWASP Greek Student Chapter***. I am also founding member of ***CampSec***, a university security team taking projects and doing research on the InfoSec field. I have given talks and presentations in university and schools, in terms of security awareness and regularly attend security conferences such as ***AppSec*** and ***Athcon.***
I strongly support FOSS and Open Source spirit and community.
